

New developments in AmiBroker

By Tomasz Janeczko
December 1, 2005

I will prepare a short description what this will be about in a few days but generally I will describe:

- features of the new user interface - new capabilities of back tester (among others: scaling in/out)
- 64 bit technology preview (will also feature multi-core/processor)
- multiple currency support
- and few other new things that appeared in most recent betas
